Targeted solution to support
lasting vaginal and urinary
tract health.*

CONTAINS 2 **CLINICALLY PROVEN** PROBIOTIC
STRAINS BACKED BY MORE THAN 20 YEARS OF
SCIENTIFIC RESEARCH

92% OF WOMEN SURVEYED NOTICED
IMPROVEMENTS IN THEIR URINARY TRACT
HEALTH AFTER USING ULTRAFLOA WOMEN'S*†

Proactive care for vaginal and urinary tract issues.*

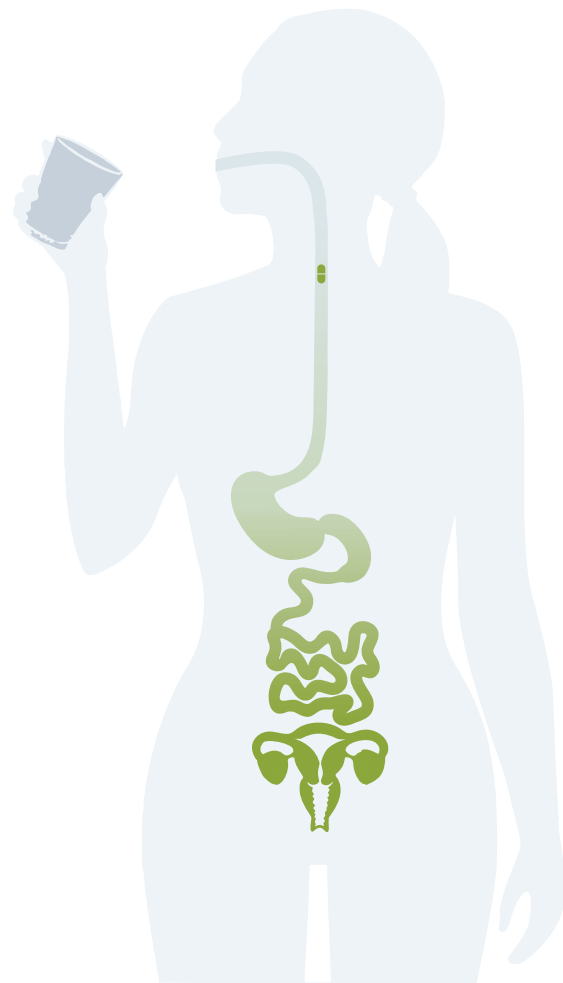

UltraFlora Women's features 2 clinically studied probiotic strains, *Lactobacillus rhamnosus* GR-1® and *Lactobacillus reuteri* RC-14®, with a 50:50 blend of 2 billion colony-forming units (CFUs). This once-daily oral probiotic has been proven safe and effective to support and maintain.*

- HEALTHY VAGINAL ODOR
- VAGINAL pH BALANCE
- URINARY COMFORT
- IMMUNITY
- HEALTHY VAGINAL MICROBIOTA
- RESTORATION OF VAGINAL AND UROGENITAL MICROFLORA

Clinically proven to target the urogenital tract.

Both strains of UltraFlora Women's have the ability to survive passage through the gastrointestinal tract after oral intake and colonize the vagina to support an optimal environment for beneficial microbiota.¹ Numerous human and *in vitro* studies also support and confirm the safety of each strain.*

- *Lactobacillus rhamnosus* GR-1: produces bactericidal compounds^{2*}
- *Lactobacillus reuteri* RC-14: produces biosurfactants, which interfere with the attachment of undesirable bacteria in the vagina^{3-5*}

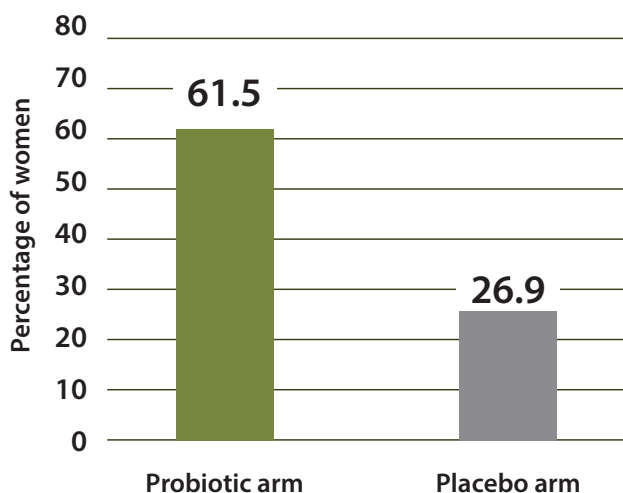

Proven partner for lasting urogenital health.

IN A CLINICAL TRIAL, PARTICIPANTS REPORTED AN APPROXIMATE 88% IMPROVEMENT IN THEIR VAGINAL HEALTH CONCERNS WHEN COMBINING PROBIOTICS WITH ANTIBIOTICS, COMPARED WITH ONLY A 50% IMPROVEMENT NOTED IN THE ANTIBIOTIC GROUP THAT RECEIVED A PLACEBO.⁵

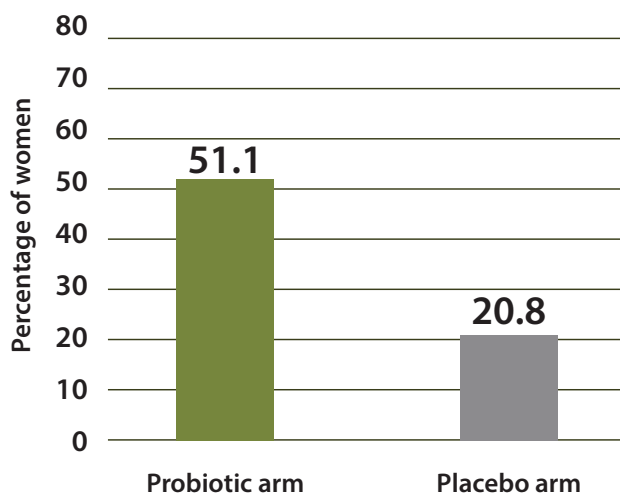

Maintains healthy vaginal microbiota.

A study examining the effects of these two strains on vaginal microbiota in 544 women ages 18-58 found that a higher percentage of the women taking the oral probiotic of *Lactobacillus rhamnosus* GR-1 and *Lactobacillus reuteri* RC-14 for six weeks had healthy vaginal microbiota as compared with the placebo group, who persisted for six more weeks after probiotic supplementation halted.^{7*}

Restitution to balanced vaginal microbiota at six weeks*

Maintenance of normal vaginal microbiota six weeks after discontinuance of supplementation*
